How I learned

The Therapeutic Order

[Diagram of the Therapeutic Order]

1. Identify and remove the obstacles to cure. Assess the determinants of health.
2. Stimulate the self-healing mechanism. Recognize the impending agent.
4. Address physical alignment. Assess proper drainage capacity.
6. Pharmacological symptom relief. Use safe and effective agents.
7. Long-term, prevention protocol.
8. Short-term, palliation protocol.
9. Life coaching, behavior change.
Energetic modalities

Since they are subtle energetic remedies, the essences tend to work mostly on the subtle and energetic aspects of ourselves.... For example, a common root cause of suffering is low self-esteem and feelings of unworthiness, which have many consequences ranging from inaction and disengagement from life, to more outwardly destructive or extreme self-sabotaging behavior. Flower essences are profound in that they are actually able to transform these root causes into something positive and improve our overall health.

Larrea tridentata (chaparral) FE

“The dream life acts as an important filter for the soul, digesting disturbing or chaotic experiences which may be too powerful to contact consciously. Chaparral is an important psychic and physical cleanser... It is broadly applicable, but works especially through the dream life to cleanse the psyche.”

—P. Kaminski and R. Katz

When to use essences in clinical practice

- When you see a spiritual, emotional or mental obstacle to cure
- With patients on polypharmacy
- In complicated or critical cases
- With patients who are too sensitive for more physiological remedies

Contraindications

- Technically there are none. Essences are safe, do not interact with other meds, including homeopathy.
- I’ve had one patient have a bad reaction after second formula.
- Are people ready to change? Are their symptoms actually important coping mechanisms (secondary gains)?
- Limit number of essences in one treatment. Too many essences confuse the picture.
Case: Gluten free

33yo F PTC for a variety of issues including neurological and hormonal.
TTG+
All sx improved with paleo diet.
Reported difficulty adhering to diet because she felt she had to eat cookies coworkers brought to the office.
Why?

Case: Gluten free

Formula
• Yarrow
• Centaury
• Agrimony

Dose: 4 gtts in water QID/PRN

Centaury indications

Positive qualities: Serving others from inner strength, with a healthy recognition of one's own needs. Acting from strength of inner purpose, saying "no" when appropriate.

Patterns of imbalance: Weak willed, dominated by others, servile, acting to please. Difficulty saying "no," neglecting one's own needs.
Case: Gluten free

"I just want to thank you. I was feeling very frustrated and sad about not keeping to my diet. It helped me a lot yesterday to know that you believe that I can do this. I obviously have done it before, but that was when I thought of it as only temporary. Making a more permanent change has been difficult to accept. The people around me often say “I could never do that” or other comments that sort of wear away at my resolve. I appreciate support and I started today with a new outlook that I hope to keep going, the belief that this is for me and no one else. It doesn’t matter if other people think it’s strange or if they think it is not realistic. I need to do this for myself and my health.”

Case taking: what are you treating?

Identify and treat the cause

personality vs. specific issue

(type remedy vs. temporary state)

Choosing essences
Case taking

- Where do you feel an emotional issue holds you back? Where would you like help?
- With a partner, take 10-15 minutes to discuss, then switch.
- Partner choose 3-5 essences and makes a dosage bottle.
- We’ll regroup to discuss.
